Reviewing IANA: a gTLD Perspective

James Galvin, Ph.D.
Director Strategic Relationships and Technical Standards

Asia Pacific Regional IGF

17 June 2011
• Provides a world class technical solution
• Scale/Knowledge/Experience of 19 million+ registrations

Generic & Sponsored TLDs

Country Code TLDs
• Two broad categories of interactions between IANA and gTLDs
  – Delegation and re-delegation changes (Nameserver (NS) records)
  – Contact information changes
  – DNSSEC changes (Delegation Signer (DS) records)
• Question is can it be improved?
• Need service level agreements (SLAs) for operations with transparent and public reporting of metrics against the SLAs
  – Develop cooperatively
  – Distinguish what is and is not under IANA control

• IETF relationship with IANA is a working example
Thank You!
